PROFILE

I build backends in Go and Python, blockchain infrastructure, and intelligence tools that turn scattered data into clear decisions. I hold a BSc in Computer Science and currently manage projects at Dynamic Eye Technology across web development, mobile development and AI solutions.

WORK EXPERIENCE

Project Manager — Dynamic Eye Technology 2024 – Present

Project manager for multiple projects at Dynamic Eye Technology, across web development, mobile development and AI solutions.

- Own the project plan, task breakdown and delivery across the team.
- Manage several projects at once across web development, mobile development and AI solutions.
- Review technical specifications, run gap analysis and turn open questions into clear client clarifications.

Senior Developer 2023 – 2024

Backend and web development in Go and Python.

- Built backend services in Go and Python (FastAPI).
- Delivered server-rendered web apps with HTMX, Tailwind and SQLAlchemy, on SQLite and PostgreSQL.

Python Developer (Data Analysis) 2019 – 2023

Moved from Excel and Power BI to Python and Streamlit, which became the turning point of my career in data and web development.

- Collected data from multiple sources, including files and databases.
- Cleaned and shaped data to meet project requirements.
- Analysed data and told the story through interactive dashboards.

Python Developer 2016 – 2018

Built web apps with Django and desktop apps with PyQt5.

- Led the team by splitting work across back-end, front-end, unit tests, QA and deployment.
- Turned client requirements into features and functions.
- Reviewed the project at every phase, and ran unit tests and QA.
- Supervised deployment to servers and standalone machines.

IT Support 2012 – 2014

My first IT job, where I learned computers, networks and servers hands-on.

- Formatted machines and installed operating systems (Windows, Linux) and software.
- Network maintenance and troubleshooting.
- Server hardware and software maintenance.

TECHNICAL LEADERSHIP

01 Application development	Python / FastAPI (backend systems)
02 Database and concurrency	PostgreSQL (transaction isolation, deadlocks, advisory locks, connection pools, query contention); SQL Server
03 Asynchronous processing	Kafka (event streaming, currently learning); Windows Task Scheduler (scheduled jobs)
04 Deployment and infrastructure	Kubernetes (containerized deployment); Docker
05 Visibility and troubleshooting	Troubleshooting
06 Reliability and operations	Hyper-V; Windows failover clustering (high availability); Disaster recovery; Load testing (Locust); Postmortems

SELECTED PROJECTS

Dynamic Eye Technology (2024 – Present, project manager): Project manager for multiple projects at Dynamic Eye Technology, across web development, mobile development and AI solutions.

Task management & organizer (Feb 2021 – Jun 2021, tech lead): A to-do system for each department. Every user has a profile with daily, done and pending tasks and can notify a supervisor on completion. Supervisors can trace and audit every task.

Job detection (Feb 2018 – May 2018, python developer): A daily job-alert system: scrapes job listings matching a chosen title, saves links and details as a dataframe, and emails them as an Excel file.

ENGINEERING EXAMPLES

Moving a content management platform from SQLite to PostgreSQL (Database concurrency and production reliability; independent project)

System: A content management platform (FastAPI, SQLAlchemy) used by about 5 people at first and about 20 later. I built it alone, and a second developer joined later.

My responsibility: I moved the database from SQLite to PostgreSQL and added indexes. The second developer helped with development and with reviewing the logs.

Problem: When several people saved at the same time, the app sometimes returned "database is locked" errors and timeouts. SQLite allows only one write at a time, so the other writes had to wait.

Outcome: After the move and the new indexes, the lock errors and timeouts became rare.

A Google Alerts collector that stopped failing silently (Reliable background execution; internal job, 2022 – 2023)

System: An internal Go tool for specific areas of interest. It collects Google Alerts, sorts each record into a preselected list of categories, and exports the result to Excel every week.

My responsibility: I built the tool, including its logging and alerts.

Problem: Early on it failed silently, crashed, and produced duplicate records.

Outcome: After I added logging and alerts, the weekly exports came out correct and the logs showed no errors.

Keeping an IT command and control system reliable in production (Production reliability; internal project)

System: ITcc, an internal IT command and control web app on PostgreSQL. It lets the IT administrator audit servers, PCs, NAS, the network, Active Directory, and replication and failover clusters, with a logging system and reports. It covered about 50 to 200 devices.

My responsibility: I was the project manager over the team that built it. The team put in place alerting on failures, logging with retention and cleanup, database backups and maintenance, and scheduled health checks and audits.

Problem: In production, failures in the cluster, replication and servers went unnoticed, reports were slow or missing, and logs were lost or hard to trace.

Outcome: All three problems were solved in production.

SKILLS

Languages: Go, Python, JavaScript / TypeScript, SQL, PHP

Back-end: FastAPI, Django, Node.js / Express, REST & JWT auth, Streamlit, PyQt5

Front-end: HTML / CSS, HTMX, Tailwind / Bootstrap, React / Vite, Three.js

Databases: PostgreSQL, SQLite, SQL Server, MySQL

Blockchain: Go blockchain development, Liquidity pool backends, Node API integration

Data & intelligence: pandas / EDA, Visualization (Plotly, Power BI), Web scraping & automation, OSINT tooling, Local LLMs / RAG

Tools: Git, Linux, VS Code / code-server, Locust load testing, Jupyter / Colab

Management

Planning & delivery: Project planning, Task breakdown, Milestone & delivery tracking, ClickUp

Team leadership: Team leadership, Task assignment, Cross-team coordination (web, mobile, AI)

Requirements & stakeholders: Specification review, Gap analysis, Client clarification

Quality & risk: Load-test coordination, Postmortems, Disaster recovery planning

EDUCATION

Arab Open University

2009 – 2013

BSc Computer Science (Information Technology & Computing)

- GPA 2.9 — award GPA 3.5
- Graduation project: a Facebook-style social network with integrated Google Maps

CERTIFICATES

Microsoft Office Specialist: Outlook Associate (Office 2019)

Microsoft, Apr 2023

Microsoft Power Platform Fundamentals

Microsoft, Mar 2023

HCIA-AI

Huawei, Mar 2022 – May 2022

R & Python for Data Analysis

Jan 2021 – Apr 2021

Python Programming & Automation

Jan 2019 – May 2019

Django Website Build

Oct 2018 – Dec 2018

LANGUAGES

Arabic: Native | **English:** Excellent reading and speaking, good writing | **French:** Intermediate
